ChatGPT Mobile Voice Input User Interviews

Milestone 2 research record for Indian college students

This document consolidates six interviews about how college students choose between typing and microphone-based voice input in the ChatGPT mobile app. It preserves the participants' reported behaviour while organising the material for analysis and problem framing.

Research segment	College students aged 18-24 in India who use ChatGPT mobile
Interview date	27 September 2026
Participants	Six participants, identified as P1-P6
Research method	Behavioural interviews
Prepared by	Hriday Pratim Barman

Editing and privacy note

Participant names, phone numbers, and email addresses have been removed. Questions and responses were lightly edited for grammar, punctuation, and readability without changing their intended meaning. Selected participant statements remain faithful to the words used during the interviews.

Interview Overview

The sample intentionally includes non-users, low-frequency users, and moderate users so the analysis can compare avoidance with conditional adoption. No participant in the interview sample was classified as a verified high-frequency voice-input user.

ID	Age	ChatGPT use	Voice use	Interview focus
P1	18-20	Daily or almost daily	Never	Feature awareness, typing habit, and social privacy
P2	21-24	3-5 days per week	Never	Typing familiarity and perceived control
P3	18-20	Daily or almost daily	1-2 times	Correction effort and careful editing
P4	21-24	Daily or almost daily	1-2 times	Privacy, accuracy, and cognitive control
P5	18-20	3-5 days per week	3-5 times	Conditional voice use in shared settings
P6	18-20	3-5 days per week	3-5 times	Accuracy, language, and task complexity

How to Read the Evidence

Each participant section begins with a concise profile, followed by the complete Q&A record. Selected statements and interviewer observations are included after the transcript. Observations describe what was reported; should only become cross-participant insights after comparison across the six interviews and the survey data.

P1 Interview Record

Feature awareness, typing habit, and social privacy

Age group	18-20
ChatGPT mobile use	Daily or almost daily
Voice-input use	Never
Main use cases	Understanding concepts or studying; assignments or research; examination preparation; career planning or job preparation; personal questions or entertainment
Typical context	Home, college, library, and sometimes while travelling
Strongest barriers	Privacy/social discomfort and typing habit

Question and Answer Record

Q1. Hi, thanks for joining. Before we start, this is a short research interview about how college students use ChatGPT mobile, especially typing and voice input. There are no right or wrong answers. I'm interested in what you have actually done. Is it okay to continue?

P1: Yes, okay.

Q2. Can you briefly tell me about yourself and how you use ChatGPT?

P1: I am studying in college. I use ChatGPT almost daily. Mostly for studies, assignments, exam preparation, sometimes career things also. And normal personal questions.

Q3. Tell me about the last time you used ChatGPT on your phone.

P1: Yesterday, I think. I was studying one concept. I was not understanding it properly, so I asked ChatGPT to explain in simple words.

Q4. Where were you at that time?

P1: In my room. Actually, near my room, my family was there also. I was sitting and using my phone.

Q5. What did you do first?

P1: I opened ChatGPT and typed the question. Then I read the answer and asked one more question.

Q6. Why did you type instead of using the microphone?

P1: Typing is easy for me. I usually type only. Also, if I speak, people may hear me. It feels little uncomfortable.

Q7. What makes it uncomfortable when people are nearby?

P1: They may listen to what I am asking. Sometimes the question is personal or maybe study-related, but still I don't want everyone to know. Also, I don't normally speak to the phone in front of people.

Q8. Can you remember the most recent time when you saw or noticed the microphone button?

P1: Yes, I know there is a mic button. I have seen it near the typing area.

Q9. What did you do when you noticed it?

P1: Nothing. I just typed.

Q10. Tell me about that specific moment.

P1: I was asking about an assignment, maybe some topic explanation. I saw the mic, but I thought typing will be better. I didn't press it.

Q11. What made typing better in that moment?

P1: I could think and write properly. If I speak fast, maybe it will not take the exact words. And if people are around, I don't feel comfortable.

Q12. Have you ever pressed the microphone button in ChatGPT mobile?

P1: No, I have not used it.

Q13. You mentioned in the survey that you knew about the microphone but also selected that you did not know voice input was available. Can you tell me what you meant by those two answers?

P1: Hmm. .. I knew there was some mic symbol, but I was not fully sure what it does. I thought maybe it is for voice conversation or something, not exactly for converting speech into the written question.

Q14. When did you first realise it could convert speech into a written prompt?

P1: I think recently, from the survey question itself. Before that I saw the mic, but I did not know clearly how it works.

Q15. Before the survey, had you ever tried to find out what happens when you tap it?

P1: No, I didn't try. I just ignored it.

Q16. Tell me about the last time you had a long question to ask ChatGPT.

P1: It was for an assignment. I had to explain the topic and ask ChatGPT to help me structure it. I typed the whole thing.

Q17. Where were you?

P1: I was in the college library, I think. Or maybe at home. I'm not fully remembering. It was on my phone.

Q18. What happened next after you decided to type?

P1: I typed some points, then changed two or three sentences. I wanted to make sure the question is clear. Then I sent it.

Q19. Why did you edit it before sending?

P1: Because sometimes I know what I want, but while typing I can arrange it better. If I just speak, I may miss some details. Typing helps me check the words.

Q20. Have you ever started typing and then thought voice input might be faster?

P1: Sometimes I think it may be faster, especially for a long question. But I still type because I am used to it.

Q21. Tell me about the last time that happened.

P1: Maybe during exam preparation. I wanted to ask a big question, but I typed it. I thought voice would save time, but then I didn't want to speak because my brother was nearby.

Q22. Was speed the main issue at that time?

P1: Not the main issue. It was more about other people being there. Also, typing feels more controlled.

Q23. What do you mean by "more controlled"?

P1: I can see the words. If there is a spelling mistake or wrong word, I can change it before sending. In voice, maybe it will capture something else.

Q24. Do spelling mistakes matter when you type?

P1: I can manage spelling mistakes while typing. Actually, typing can have mistakes also, but I can see and correct them. With voice, I don't know whether it understood correctly.

Q25. Have you used voice typing anywhere else, such as WhatsApp or Google?

P1: I have used it maybe once or twice on WhatsApp, but not regularly.

Q26. Tell me about the last time you used voice typing outside ChatGPT.

P1: I don't remember exactly. Maybe I sent a voice message, not voice typing. Actually, I usually send normal text messages.

Q27. What would need to change for you to try the ChatGPT microphone?

P1: If I am alone and if I know it will write correctly. Maybe if it shows the words clearly before sending. Also, I should understand how to use it.

Q28. If you were alone, would you definitely use it?

P1: Maybe yes. For a long question, I may try it. But for small questions, typing is already quick.

Q29. Can you give an example of a question where you might try it?

P1: If I want to explain a full problem from an assignment, with many details. Speaking may be easier than typing all of it.

Q30. What could stop you even when you are alone?

P1: If the language or accent is not understood correctly. I sometimes mix English with Telugu. So it may write wrong words. Then correcting will take time.

Q31. Have you personally experienced ChatGPT misunderstanding your voice?

P1: In ChatGPT, no, because I never used it. In other apps, sometimes it misunderstands. So I expect the same problem maybe.

Q32. What would make you trust it enough to use it?

P1: If I can see the written prompt and edit it before ChatGPT answers. And maybe if it understands Indian accent and Telugu words.

Q33. Thinking about your daily ChatGPT use, when do you normally use your phone?

P1: Mostly at home, college, and sometimes travelling. At college there are always people. At home also family members are there mostly.

Q34. Tell me about the last time you were somewhere speaking aloud felt difficult.

P1: In the library. Everyone is silent, so speaking to the phone would feel awkward. Also in class breaks, friends are around and they may ask what I am doing.

Q35. What did you do instead?

P1: I typed quietly. It was not a big problem.

Q36. If typing is not a big problem, why would you need voice input?

P1: It is useful when the question is very long or when I am in a hurry. Otherwise typing is fine.

Q37. Is there anything else about voice input that affects your decision?

P1: Privacy mainly. And accuracy. I don't want to send an incorrect question and get an irrelevant answer.

Q38. What do you mean by privacy in this case?

P1: People hearing my question. Not data privacy exactly. Just people nearby knowing what I am asking.

Q39. If ChatGPT displayed a message saying "Tap the mic to dictate and edit before sending," would that help?

P1: Yes, then I would understand it better. Maybe I would try once when alone.

Q40. What would you expect from the first use?

P1: It should be simple. Tap, speak, see the written words, correct if needed, and then send. If it directly sends without showing, I won't like it.

Q41. Looking back, why have you never used the microphone so far?

P1: Habit mostly. I type everything. And I am often around people. Also I was not fully clear that it changes speech into a written prompt.

Q42. Which one is stronger for you: habit, privacy, or concern about accuracy?

P1: Privacy and habit together. If I am alone, maybe habit still makes me type. Accuracy is also there, but I have not actually tested it.

Q43. Is there anything you would like to add?

P1: Voice is probably convenient for some people. For me, typing is more comfortable because I can think and check the question. But for long problems, I may use it if I am alone.

Q44. Thank you. That covers my questions.

P1: Okay, thank you.

Selected Participant Statements

"I knew there was some mic symbol, but I was not fully sure what it does."

"If I speak, people may hear me. It feels little uncomfortable."

"Typing helps me check the words."

"For a long question, I may try it. But for small questions, typing is already quick."

"I can see the written prompt and edit it before sending."

Interviewer Observations

- Participant initially described awareness of the microphone as definite, but later clarified that the feature's exact function was unclear.
- The participant did not describe a real ChatGPT voice-input incident because they have never used the microphone.

- Privacy was expressed as social privacy-nearby people hearing the question-rather than concern about data collection.
- Typing is not merely a fallback; it helps the participant formulate and verify the question.
- The participant was open to trying voice input under specific conditions but did not see a strong enough need to change current behaviour.

P2 Interview Record

Typing familiarity and perceived control

Age group	21-24
ChatGPT mobile use	3-5 days per week
Voice-input use	Never
Main use cases	Understanding concepts or studying
Typical context	Mostly at home; sometimes college
Strongest barriers	Lack of awareness and typing familiarity

Edited Question and Answer Record

Q1. Hi, thanks for joining. This interview is about how you actually use ChatGPT mobile. There are no right or wrong answers. Is it okay to continue?

P2: Yes, okay.

Q2. Please tell me a little about yourself and how you use ChatGPT.

P2: I'm a college student. I use ChatGPT maybe three or four days in a week. Mostly when I don't understand a concept or topic. I ask for explanation in simple language.

Q3. Tell me about the last time you used ChatGPT on your phone.

P2: I used it two days back for one subject. I was reading something and did not understand one part, so I asked ChatGPT to explain.

Q4. Where were you?

P2: At home, in my room.

Q5. What did you do from the time you opened the app?

P2: I opened the app, typed the question, and sent it. Then I asked a follow-up question also.

Q6. Why did you type the question?

P2: Because typing is familiar. I know how to use the keyboard, so I just type and send.

Q7. How long did it take you approximately?

P2: Maybe one or two minutes. It was not a very long question.

Q8. Did you notice a microphone button while typing?

P2: No, I don't think so. I never noticed it.

Q9. Before this interview, did you know ChatGPT mobile had a microphone button for dictating a prompt?

P2: No, I did not know. I knew there is voice talking in some apps, but not this exact thing.

Q10. When you say "voice talking," what do you mean?

P2: Like speaking with the assistant and getting an answer by voice. I thought ChatGPT had that maybe, but I didn't know I could speak and make it into text.

Q11. Have you ever pressed any microphone button in ChatGPT?

P2: No.

Q12. Tell me about the last time you used voice typing on your phone in any other app.

P2: I think I used it in WhatsApp once, to search something maybe. Actually, I mostly type WhatsApp messages too. I don't use voice typing much.

Q13. What happened when you used it?

P2: It wrote some words wrong, I think. I stopped using it after that. But I don't remember the exact message.

Q14. What do you normally do when you have a longer question for ChatGPT?

P2: I type it in parts. First I explain the topic, then I ask what I need. Sometimes I write the question in notes first.

Q15. Tell me about the last time you did that.

P2: Last week, I had a question about a chapter. I typed some points in ChatGPT directly. I don't think I used Notes. Maybe I wrote in WhatsApp draft first. I'm not sure.

Q16. Why do you sometimes write the question in parts?

P2: It is easier to think. If I type everything together, I may forget what exactly I want to ask. So I send one question and then another.

Q17. Does typing feel faster than speaking for you?

P2: For normal questions, yes. I can type quickly. Speaking aloud may take the same time, because I have to check whether it understood correctly.

Q18. Have you ever avoided speaking to your phone because people were nearby?

P2: Not really. I don't think about it much. I am not usually asking questions by voice, so I don't know.

Q19. Tell me about the last time speaking aloud on your phone would have felt uncomfortable.

P2: Maybe in a classroom or library, but I would not speak there for any app. At home, I can speak if needed.

Q20. Do you use ChatGPT in shared or public places?

P2: Sometimes in college, but mostly I use it at home. In college I may check one answer quickly.

Q21. What did you do the last time you used it in college?

P2: I typed a question about an assignment. I was sitting with friends. I just typed it because that is normal.

Q22. Why was typing the natural choice?

P2: Because I don't have to explain to anyone what I am doing. But honestly, I would type even if I was alone.

Q23. What would you expect if you tapped the microphone button?

P2: It may start recording my voice. I don't know whether it will send directly or convert it into text.

Q24. What would you want to see before sending?

P2: The written sentence. I would like to check it once. If it is wrong, I should be able to edit it.

Q25. What could make you try it once?

P2: If I had a very long question and typing was difficult. Or if someone showed me how it works.

Q26. Can you describe a recent long question you typed?

P2: It was about a difficult topic in my subject. I had to explain the background and ask for an example. It was maybe five or six lines.

Q27. Where were you and what happened next?

P2: I was at home. I typed slowly, sent it, then saw the answer was not exactly what I wanted. I added another message to clarify.

Q28. Would speaking have helped in that situation?

P2: Maybe it would have been faster, but I'm not sure. I would still have to see whether all the details were captured.

Q29. Have you ever compared typing and voice input for the same question?

P2: No, I haven't.

Q30. What is the main reason you have not tried voice input?

P2: I didn't know it was available. Also, typing is already comfortable, so I never searched for another way.

Q31. If you had known about it earlier, would you have used it?

P2: Maybe once. I would try to see what happens. But I don't think I would use it regularly.

Q32. Why not regularly?

P2: Most of my questions are short. For short questions, typing is quicker. For long questions, maybe voice can help, but I don't ask long questions very often.

Q33. What kinds of questions do you usually ask?

P2: Definitions, explanations, comparisons, and sometimes examples. Mostly study questions.

Q34. Do these questions require careful wording?

P2: Not too much. I just need the topic and what I don't understand. It is simple.

Q35. Does spelling affect your choice between typing and speaking?

P2: Not really. I can correct spelling while typing. If voice writes the wrong word, I may not notice immediately.

Q36. Have you had that problem with any voice tool?

P2: Sometimes with Google search voice. It catches a different word. Maybe because of pronunciation. It is not a major issue, but it is irritating.

Q37. What would make voice input useful for you?

P2: If it is accurate and saves time. It should understand the words and show the text before sending.

Q38. What would make it inconvenient?

P2: If I have to correct many words. Then typing is better. Also if it starts recording when I don't want it, that would be uncomfortable.

Q39. Are you concerned about people hearing you use it?

P2: Not especially. I just don't usually speak to my phone. If I'm at home, it is okay. In public, I may not use it, but I don't have a strong problem.

Q40. What would be the first situation in which you might use it?

P2: Maybe when I am travelling or carrying something and need to ask a question. Or for a long explanation.

Q41. Can you remember a time when your hands were busy and you needed ChatGPT?

P2: No, not really. I usually use it when I am sitting and studying.

Q42. So, for your normal study use, what will you continue using?

P2: Typing. It is simple and familiar.

Q43. Is there anything that could change your mind?

P2: If I try it and it works properly, I may use it sometimes. But I don't feel I need it now.

Q44. Is there anything else you want to add?

P2: No, I think that's all. I didn't know this feature was there.

Q45. Thank you for your time.

P2: Okay, thank you.

Selected Participant Statements

"I didn't know it was available."

"For normal questions, typing is quicker."

"I would still have to see whether all the details were captured."

"If I try it and it works properly, I may use it sometimes."

"Most of my questions are short."

Interviewer Observations

- Awareness was the clearest barrier: the participant had not noticed or understood the microphone feature.
- The participant did not feel a strong need for voice input because typical prompts are short.
- Typing was described as both familiar and sufficiently fast, rather than merely the default option.
- Social discomfort was weaker than for P1; the participant could imagine speaking at home but would avoid it in a library or classroom.
- The participant had a vague, partly uncertain memory of voice recognition errors in another app.
- The participant is open to trying voice input but does not currently expect to become a regular user.

P3 Interview Record

Correction effort and careful editing

Age group	18-20
ChatGPT mobile use	Daily or almost daily
Voice-input use	1-2 times
Main use cases	Studying; assignments or research; examination preparation; career planning; writing, editing, or communication; personal questions or entertainment
Typical context	Home, room, and college
Strongest barriers	Typing familiarity and need for careful wording

Edited Question and Answer Record

Q1. Hi, thanks for joining. This interview is about how you actually use ChatGPT mobile, especially typing and microphone input. There are no right or wrong answers. Is it okay to continue?

P3: Yes, okay.

Q2. Tell me a little about yourself and how you use ChatGPT.

P3: I'm a college student. I use ChatGPT daily, mostly for studies and assignments. Sometimes I use it for writing or editing also. Like checking a message or making something better.

Q3. Tell me about the last time you used ChatGPT on your phone.

P3: Yesterday I used it for an assignment. I had written one answer and wanted to improve the grammar. I pasted it and asked ChatGPT to correct it.

Q4. Where were you?

P3: At home. I was sitting in my room.

Q5. What did you do first?

P3: I opened the app, copied my text, pasted it, and asked it to improve the answer. Then I changed some parts myself.

Q6. Why did you type the instruction instead of using the microphone?

P3: Typing is more comfortable. I know exactly what I want to say, and I can write the instruction properly.

Q7. Tell me about the last time you used the microphone in ChatGPT.

P3: It was some time back. I asked one simple question using voice. I think it was about a study topic.

Q8. Where were you?

P3: At home, maybe in the kitchen area. I was alone for some time.

Q9. What happened after you tapped the microphone?

P3: I spoke the question, then it came as text. I checked it and sent it.

Q10. What were you trying to ask?

P3: Something like, "What is the difference between these two terms?" I don't remember the exact terms now.

Q11. Why did you use voice that time?

P3: It was a quick question. I didn't want to type for just one line. Voice felt convenient then.

Q12. What happened after ChatGPT converted your speech into text?

P3: It was mostly correct. I think one word was different, so I corrected it.

Q13. Which word was incorrect?

P3: I don't remember exactly. Maybe the subject name. It was a technical word.

Q14. Did you notice the mistake before sending?

P3: Yes, I saw it and corrected it. Actually, maybe I corrected it after sending by asking again. I'm not fully sure.

Q15. What makes you uncertain?

P3: It was only one or two times, so I don't remember the full thing. I think I checked it before sending, but maybe I noticed in the answer.

Q16. Have you used the microphone more than once?

P3: Yes, one or two times. Not regularly.

Q17. Tell me about the other time you used it.

P3: I asked another small question, maybe a definition. I was in my room. It was okay.

Q18. Why didn't you continue using it after those times?

P3: Typing is familiar. Also, for assignments or writing, I need careful wording. Voice may write some spelling mistakes or wrong words.

Q19. Tell me about the last time you had to write a careful prompt.

P3: Recently I asked ChatGPT to rewrite a paragraph in formal English. I typed the full instruction and added the paragraph. I wanted the tone to be correct.

Q20. Why was typing useful for that task?

P3: I could choose the words. If I say it by voice, it may make the sentence different. Also, I can see spelling mistakes while typing.

Q21. Do you use voice input for writing or editing tasks?

P3: No, I prefer typing for those. Voice is only for quick and simple things.

Q22. What counts as a quick and simple thing for you?

P3: Asking a definition, meaning, or one small doubt. Not a full assignment question.

Q23. Tell me about the last time you chose typing even though the microphone was available.

P3: I was asking ChatGPT to help me organise an assignment answer. I typed because I had many details to include. I didn't want the words to come incorrectly.

Q24. Where were you?

P3: At home. My sister was around, but she was not sitting with me.

Q25. Did her presence affect your decision?

P3: Maybe a little. I was not speaking aloud anyway. But mainly I wanted correct words.

Q26. Have you ever avoided voice input because people could hear you?

P3: Sometimes, yes. If people are nearby, I don't want to speak to my phone. But I don't use it enough to say it is a big problem.

Q27. Tell me about the last time that happened.

P3: In college, I wanted to ask something quickly. Friends were around, so I typed it. It was not a serious issue; typing was normal.

Q28. What was the question?

P3: It was related to an assignment. Maybe I asked for some points. I don't remember exactly.

Q29. Would you have used voice if you were alone?

P3: Maybe, if it was a short question. If it was a detailed question, still I may type.

Q30. Why would you type a detailed question?

P3: Because I can check whether I included everything. While speaking, I may forget one point or say it in a confusing way.

Q31. Does speaking help you think through a problem?

P3: Not really. I usually think and type at the same time. Typing helps me organise.

Q32. What kind of corrections have you needed after voice input?

P3: Sometimes a word is captured wrong. Sometimes spelling is not correct. Maybe the sentence also becomes strange.

Q33. Can you describe a specific correction?

P3: One time the name of a topic came differently. I deleted that word and typed it again. It was a small correction.

Q34. How much time did that take?

P3: Only a few seconds. So it was not a big problem.

Q35. If corrections are only a few seconds, why not use voice more often?

P3: Because typing is still easier for me. I'm used to typing messages and questions. Also, I don't want to check every sentence after speaking.

Q36. What would make you use voice more often?

P3: Better accuracy, especially for technical words. And if it works well for mixed language. Sometimes I use English and Telugu together.

Q37. Tell me about a time when language mixing affected voice input.

P3: I don't think it happened in ChatGPT. I'm just saying it may happen because I use both languages. In normal voice typing, some Telugu words are not captured correctly.

Q38. What would you want the microphone to do before ChatGPT answers?

P3: Show the full written prompt. I should be able to edit it. If it sends directly, I won't be comfortable.

Q39. Did ChatGPT show you the written prompt when you used voice?

P3: Yes, I think so. It appeared in the typing box. That is why I could check it.

Q40. What did you do after checking it?

P3: I corrected one word and pressed send. Or maybe I sent first-sorry, I'm confusing it. But normally I would check.

Q41. What is the main reason you type today?

P3: It is convenient and familiar. I can avoid spelling mistakes and make the question clear.

Q42. Which is more important: speed or correctness?

P3: Correctness. For a quick question, speed matters. For studies and writing, correct wording matters more.

Q43. Are there any situations where voice is clearly better for you?

P3: If I'm in a hurry and asking one simple question. Also if I have one hand busy, maybe. But that does not happen often.

Q44. Can you remember a time your hands were busy while using ChatGPT?

P3: No, not really. Maybe while doing household work, but I didn't use ChatGPT then.

Q45. What will you use the next time you ask ChatGPT for writing help?

P3: Typing. Definitely typing.

Q46. What about the next time you ask a simple definition?

P3: I may type also. If I remember the microphone, maybe I'll use voice.

Q47. What would stop you from using it then?

P3: If people are around, or if I feel the word may be misunderstood.

Q48. Is there anything else you want to add?

P3: Voice is good and convenient sometimes, but typing is better for me because I can avoid spelling mistakes.

Q49. Thank you for sharing your experience.

P3: Thank you.

Selected Participant Statements

"Typing is more comfortable."

"For assignments or writing, I need careful wording."

"Voice is only for quick and simple things."

"Correctness matters more."

"Voice is good and convenient sometimes, but typing is better for me because I can avoid spelling mistakes."

Interviewer Observations

- The participant has tried voice input but did not form a regular habit from those trials.
- Voice was associated with low-complexity prompts, while typing was associated with academic and writing tasks.
- The participant reported minor corrections but could not confidently recall whether a correction happened before or after sending.

- The participant's stated concern about spelling is slightly imprecise because voice input creates recognition errors rather than ordinary spelling errors.
- Social discomfort exists but is not the dominant barrier.
- The participant sees voice as a situational convenience, not a replacement for typing.

P4 Interview Record

Privacy, accuracy, and cognitive control

Age group	21-24
ChatGPT mobile use	Daily or almost daily
Voice-input use	1-2 times
Main use cases	Studying; assignments or research; examination preparation; career planning; writing, editing, or communication; personal questions or entertainment
Typical context	Home, college, shared rooms, and public or noisy places
Strongest barriers	People nearby, typing habit, and need to think through the problem

Edited Question and Answer Record

Q1. Hi, thanks for joining. This interview is about how you use ChatGPT mobile, particularly typing and microphone input. There are no correct or incorrect answers. Is it okay to continue?

P4: Yes, okay.

Q2. Please tell me about yourself and how you use ChatGPT.

P4: I'm a college student. I use ChatGPT almost every day. I use it for study, assignments, exam preparation, career questions, writing, and sometimes personal things also.

Q3. Tell me about the last time you used ChatGPT on your phone.

P4: Yesterday I used it for an assignment. I had an image and some information, and I wanted help understanding what to do.

Q4. Where were you?

P4: I was at home, sitting in the hall. My family was around.

Q5. What did you do?

P4: I uploaded the image and typed my question. I explained what I needed and asked for steps.

Q6. Why did you type the question?

P4: Because I had to think about the whole problem. I wanted to write whatever was coming to my mind, then arrange it. Also, people were around, so I could not speak.

Q7. Tell me about the last time you used the microphone in ChatGPT.

P4: Maybe two or three weeks ago. I had a long problem to explain, so I used the phone mic.

Q8. Where were you?

P4: I was in my room and alone at that time.

Q9. What were you trying to explain?

P4: It was related to studies, maybe an assignment or some personal decision. I had many details, so typing everything felt lengthy.

Q10. What happened after you started speaking?

P4: I spoke for maybe one or two minutes. Then the words came in the text box. Some words were wrong, especially one or two terms. I corrected them and sent it.

Q11. Which words were wrong?

P4: I don't remember exactly. Some technical words and maybe my pronunciation. The sentence was not fully as I said it.

Q12. Did you notice the mistakes immediately?

P4: Yes, while reading before sending. I corrected a few words.

Q13. How many corrections did you make?

P4: Maybe three or four. Not too many. Actually, I think it was only two or three. I don't remember exactly.

Q14. What happened after you corrected the prompt?

P4: I sent it. The answer was useful, but I had to ask one more question because it did not understand one detail properly.

Q15. Was the problem caused by the transcription or by your original explanation?

P4: Maybe both. The words were not fully correct, and I was also explaining many things together.

Q16. Why did you choose voice for that long problem?

P4: Typing would take a lot of time. I wanted to explain everything continuously. Speaking felt easier at that moment because I was alone.

Q17. Before that, had you used the microphone in ChatGPT?

P4: I think once before. It was also a long question. I don't use it regularly.

Q18. What did you do the first time?

P4: I spoke and then corrected some words. I don't remember the exact question. Maybe I was asking for advice.

Q19. Where were you then?

P4: At home, in my room. I was alone, I think.

Q20. What usually stops you from using the microphone?

P4: People around me, typing habit, and sometimes it misunderstands my words or accent.

Q21. Tell me about the last time people around you stopped you from using voice.

P4: Yesterday in the hall. I wanted to ask a detailed question, but my parents were there. I typed it instead.

Q22. What did you do while typing?

P4: I started writing the problem. I first wrote the main issue, then added details. I deleted some words and rewrote them.

Q23. Why did typing help you in that situation?

P4: I could think through the problem. When I type, I can see what I'm saying. Sometimes I don't know the full question initially. Writing helps me understand it.

Q24. Does speaking make it harder to organise your thoughts?

P4: For me, yes, sometimes. I may go in different directions. But for a long explanation, speaking is still faster.

Q25. Which is more useful: the speed of speaking or the control of typing?

P4: It depends. For long problems, speaking speed is useful. For careful questions, typing control is better.

Q26. Tell me about a careful question you typed recently.

P4: I asked ChatGPT to compare two career options. I wanted to include my skills, location, salary expectation, and family situation. I typed it because I needed to explain correctly.

Q27. Where were you?

P4: In my room, but someone was outside. I didn't want to speak about those things.

Q28. What happened after sending the typed prompt?

P4: ChatGPT gave a general answer. I added more details in another typed message. I think the answer became better.

Q29. Would voice input have been useful for that question?

P4: Maybe for the first explanation, but I would still check everything. Since it was personal and people were nearby, typing was better.

Q30. You mentioned that your laptop microphone does not work. Tell me about how that affects your ChatGPT use.

P4: When I use ChatGPT on my laptop, I always type because the mic is not working. I'm not using voice there. On my phone, the mic works.

Q31. When did you last face this laptop problem?

P4: Recently, when I was doing an assignment. I wanted to explain something by voice, but the laptop microphone was not working, so I typed.

Q32. Did you switch to your phone?

P4: Sometimes I use my phone, but that day I continued on the laptop because the files were there.

Q33. What made you use the phone microphone on other occasions?

P4: When I was alone and the problem was long. Phone voice is more convenient then.

Q34. How do you feel when you have to correct the transcribed words?

P4: It is slightly irritating, but if it saves typing time, it is okay. If there are too many mistakes, I will stop using it.

Q35. Have you ever stopped using voice halfway through a prompt?

P4: Maybe once. I think the app did not catch the words properly. Or maybe my internet was slow. I'm not sure.

Q36. What happened next?

P4: I typed the remaining part. It was not a big issue.

Q37. Do you use voice input for short questions?

P4: Not usually. I type short questions because typing takes only a few seconds.

Q38. What about when you are outside or travelling?

P4: I usually type. Speaking in public feels awkward, and there can be noise.

Q39. Tell me about the last time you used ChatGPT in a public or shared place.

P4: In college, I was with classmates. I used ChatGPT to check an assignment point. I typed quietly.

Q40. What would need to improve for you to use voice input more often?

P4: It should understand words and accents better. It should not change technical words. Also, there should be an easy way to edit the text before sending.

Q41. Does the current app let you edit the text before sending?

P4: Yes, I think the text appears there. I can edit. Maybe sometimes I just send quickly without checking fully.

Q42. What would make you trust the transcription?

P4: If I use it many times and see that it is accurate. At present I expect I will have to correct it.

Q43. Would a language or accent setting help?

P4: Yes, maybe. If it understands Indian accent and words from Telugu or Hindi, that would help. I don't always speak only standard English.

Q44. What is the biggest reason you continue to type?

P4: People around me and habit. Also typing helps me think. Even when I am alone, I may type if the problem is sensitive or needs proper wording.

Q45. What is the biggest situation in which you would choose voice?

P4: Being alone with a long problem and not wanting to spend ten minutes typing.

Q46. Can you describe a future example?

P4: If I have a complicated assignment doubt and I'm alone in my room, I may speak the whole background and ask for a solution. Then I'll correct the words and send.

Q47. If you are alone but the question is short, what will you use?

P4: Probably typing. It is faster.

Q48. Is there anything else about your experience?

P4: Voice is useful, but it is not usable everywhere. Typing is more private and gives better control.

Q49. Thank you for sharing your experience.

P4: Okay, thank you.

Selected Participant Statements

"When I type, I can see what I'm saying."

"For long problems, speaking speed is useful. For careful questions, typing control is better."

"People around me and habit. Also typing helps me think."

"Voice is useful, but it is not usable everywhere."

"Typing is more private and gives better control."

Interviewer Observations

- P4 has a clear use case for voice: explaining long problems when alone.
- The participant does not treat voice as a universal replacement for typing; context determines the choice.
- Typing serves a cognitive purpose by helping the participant discover and organise the problem.
- Social privacy is a major constraint, especially for personal, career, and study-related questions.
- The participant has access to voice on the phone but not on the laptop, creating device-dependent behaviour.
- The participant accepts some correction effort if voice saves substantial typing time.
- The participant's recall of the exact correction count and first voice-use context was somewhat uncertain.

P5 Interview Record

Conditional voice use in shared settings

Age group	18-20
ChatGPT mobile use	3-5 days per week
Voice-input use	3-5 times
Main use cases	Assignments or research; career planning or job preparation; occasional studying or concept explanation
Typical context	Home, bedroom, living room, and college
Strongest barriers	People nearby and social awkwardness

Edited Question and Answer Record

Q1. Hi, thanks for joining. This interview is about how you use ChatGPT mobile, particularly typing and microphone input. There are no right or wrong answers. Is it okay to continue?

P5: Yes, okay.

Q2. Please tell me about yourself and how you use ChatGPT.

P5: I'm a college student. I use ChatGPT three to five days in a week. Mostly for assignments and career preparation. Sometimes I ask for explanations also, but not every day.

Q3. Tell me about the last time you used ChatGPT on your phone.

P5: I used it for an assignment. I had to understand one topic and prepare some points. I asked ChatGPT to give me an outline.

Q4. Where were you?

P5: At home, in my room.

Q5. What did you do?

P5: I typed the topic and asked for important points. Then I copied some points into my notes.

Q6. Why did you type instead of using voice?

P5: Typing is better. I can write the exact topic. Also, if I speak, sometimes it may understand the word differently.

Q7. Tell me about the last time you used the microphone in ChatGPT.

P5: It was for a long problem. I had to explain many things, so I used voice instead of typing.

Q8. Where were you?

P5: I think I was alone at home. Maybe in my room. I usually use voice only when I'm alone.

Q9. What were you trying to explain?

P5: It was related to my career, maybe choosing between some options. I wanted to tell ChatGPT my situation and ask what I should do.

Q10. Why did you choose voice for that situation?

P5: There were many details. Typing all of it would be tiring. Speaking was easier and faster.

Q11. What happened after you started speaking?

P5: I spoke the full problem, then checked the written prompt. It was mostly correct. I corrected one small thing and sent it.

Q12. What did you correct?

P5: A word was missing or changed. I don't remember exactly. It was not important.

Q13. How many times have you used the microphone approximately?

P5: Maybe four times. Three to five times, something like that.

Q14. What did you use it for on the other occasions?

P5: Mostly long explanations. One was an assignment question. Another was career-related. I may have used it for a personal question also.

Q15. Tell me about the assignment occasion.

P5: I had a question with background information. I explained what I had done and what I needed. It was easier to speak all the points.

Q16. Where were you?

P5: In my room. The door was closed.

Q17. Did you check the transcription before sending?

P5: Yes, normally I check. That time I think it was correct, so I sent it.

Q18. Have you ever needed many corrections?

P5: No, rarely. Sometimes one or two words. Mostly it understands.

Q19. What kind of words cause problems?

P5: Names or technical words. Normal words are okay. Maybe if I speak quickly, it can miss something.

Q20. Tell me about the last time it misunderstood a word.

P5: I was explaining an assignment and one subject term came wrong. I saw it and changed it. It didn't affect much.

Q21. Did the correction reduce the time saved by speaking?

P5: No, it was still faster than typing the whole explanation.

Q22. If voice saves time, why do you still type most of the time?

P5: Because I'm not always alone. People are usually around. I don't want them to hear what I'm asking.

Q23. Tell me about the last time you wanted to use voice but did not.

P5: I was in the living room and my family was there. I had a long question for an assignment. I typed it instead.

Q24. What happened while you typed?

P5: I started typing, then someone asked me something. I stopped and continued later. It took more time.

Q25. Why didn't you move to another place and use voice?

P5: I could have, but I was already there and typing was okay. Also, I don't want to speak loudly even if people are not directly listening.

Q26. What do you mean by "speaking loudly"?

P5: To use voice input, I need to speak clearly. If I speak to the phone, people may notice. It feels awkward.

Q27. Is the concern mainly privacy or embarrassment?

P5: Both maybe. Privacy is more. They may ask what I am talking about.

Q28. Do you avoid voice input even for non-personal questions?

P5: If people are around, yes. Even for assignments. I just prefer typing.

Q29. Tell me about the last time you used ChatGPT in college.

P5: I was with classmates and needed help with an assignment. I typed a short question. I didn't use voice.

Q30. Why was typing suitable for that question?

P5: It was not very long. Typing was easy. Also, there was noise.

Q31. Have you used voice in a noisy place?

P5: No, I don't think so. It may not hear properly.

Q32. What would make you use voice in more situations?

P5: If I had a private place, or if the app could understand even when I speak softly. But speaking softly may also cause mistakes.

Q33. How do you decide whether a question is suitable for voice?

P5: If it has many details and I am alone, I use voice. If it is short, or if I need exact wording, I type.

Q34. Tell me about a time you needed exact wording.

P5: For career preparation, I asked ChatGPT to improve my resume points. I typed those because the wording matters. I didn't want voice to change the words.

Q35. What happened after you typed them?

P5: It gave better sentences. I selected some and edited them again.

Q36. Would you use voice for a resume prompt?

P5: Maybe to explain my background first, but for the final wording I would type.

Q37. Why?

P5: Resume words should be correct and professional. Typing gives more control.

Q38. Have you ever used voice input for a short question?

P5: I think once I did, but mostly I use it for long problems. Short questions are easy to type.

Q39. What happened that time?

P5: I asked something quickly and got the answer. I don't remember the exact question.

Q40. Was voice faster?

P5: Maybe not much faster. It was just convenient because I was already holding the phone.

Q41. What do you think about the accuracy of ChatGPT voice input?

P5: It is okay. Better than I expected. But I still check because one wrong word can change the meaning.

Q42. Does your accent or language affect the transcription?

P5: Sometimes. I speak in English mostly, but pronunciation is Indian. Some words may be different. I also use local words sometimes.

Q43. Can you describe a specific example?

P5: No, I don't remember a specific one. Just sometimes the sentence looks slightly different.

Q44. What do you expect before sending a voice prompt?

P5: It should show the full text. I want to read it once and correct anything.

Q45. Has the app ever sent the wrong prompt because you did not check?

P5: No, I usually check. Once I may have sent quickly, but it was fine.

Q46. What is the main advantage of voice input for you?

P5: It saves time for long explanations. I can say the whole thing naturally.

Q47. What is the main disadvantage?

P5: People around me. I cannot use it freely. Also, if a word is wrong, I need to correct it.

Q48. If you had a private study room every day, would you use voice more?

P5: Yes, definitely for assignments with many details. Maybe not for everything.

Q49. What would you use for a short definition?

P5: Typing. It is quick.

Q50. What would you use for explaining a complicated personal or career situation?

P5: Voice if I am alone. If not, typing.

Q51. Is there anything else about your experience?

P5: Typing is better overall for me, but voice is useful when the problem is long.

Q52. Thank you for your time.

P5: Okay, thank you.

Selected Participant Statements

"Typing is better."

"There were many details. Typing all of it would be tiring."

"If people are around, I don't want them to hear what I'm asking."

"It saves time for long explanations."

"For resume words, typing gives more control."

Interviewer Observations

- P5 has more actual voice experience than P3 and P4, but still describes typing as the preferred general method.
- Voice provides meaningful time savings for long explanations and is not rejected because of poor accuracy.
- Social context is the strongest limiter: the participant uses voice mainly when alone.
- The participant distinguishes between exploratory explanations, which can be spoken, and final or professional wording, which should be typed.
- Corrections are reportedly rare, but the participant could not recall exact examples in detail.
- The participant's behaviour suggests conditional adoption rather than resistance: privacy determines access, while prompt length determines value.

P6 Interview Record

Accuracy, language, and task complexity

Age group	18-20
ChatGPT mobile use	3-5 days per week
Voice-input use	3-5 times
Main use cases	Assignments or research; occasional concept explanations
Typical context	Home, college, and occasionally outdoors
Strongest barriers	Not recorded

Edited Question and Answer Record

Q1. Hi, thanks for joining. This interview is about how you use ChatGPT mobile, especially typing and microphone input. There are no right or wrong answers. Is it okay to continue?

P6: Yes, okay.

Q2. Please tell me a little about yourself and how you use ChatGPT.

P6: I'm a college student. I use ChatGPT three or four days in a week. Mainly for assignments. Sometimes I ask for explanations, but mostly assignment work.

Q3. Tell me about the last time you used ChatGPT on your phone.

P6: I used it yesterday for an assignment. I asked for some points about a topic and examples.

Q4. Where were you?

P6: At home. I was sitting in my room.

Q5. What did you do first?

P6: I opened ChatGPT and typed the topic. I asked it to give simple points and examples.

Q6. Why did you type that question?

P6: I usually type. The topic name was already in my notes, so typing was easy.

Q7. Tell me about the last time you used the microphone in ChatGPT.

P6: Recently, maybe last week. I asked a quick question using voice.

Q8. Where were you?

P6: At home, I think. Maybe outside also. I don't remember exactly.

Q9. What were you trying to ask?

P6: It was a simple question about my assignment. I wanted to know the meaning of something.

Q10. Why did you use voice that time?

P6: It was quicker. I just asked and got the answer. No need to type.

Q11. What happened after you tapped the microphone?

P6: I said the question, and it became text. I checked it quickly and sent it.

Q12. Was the text correct?

P6: Yes, mostly. Maybe one word was a little wrong, but I corrected it. Or maybe I just sent it. I'm not sure.

Q13. How many times have you used the microphone approximately?

P6: Three to five times.

Q14. What did you use it for on the other occasions?

P6: Short questions only. Meaning of a word, one doubt, or asking for an example.

Q15. Tell me about the last time you used it for a quick question.

P6: I asked, "What is this concept?" and gave the topic name. Then ChatGPT explained it.

Q16. Where were you?

P6: I was at home. My mother was in another room.

Q17. Did you feel uncomfortable speaking aloud?

P6: No, not really. At home it is okay. I don't mind using voice if it is a small question.

Q18. Are you often in places where speaking aloud feels uncomfortable?

P6: Not often. Sometimes in college or when many people are around, but usually I am at home.

Q19. Tell me about the last time you used ChatGPT in college.

P6: I used it to check something for an assignment. I typed it because I was sitting with friends.

Q20. Why didn't you use voice there?

P6: I didn't want to speak in front of them. But typing was also easy.

Q21. If you were alone in college, would you use voice?

P6: Maybe, if the question was short. If there is noise, maybe not.

Q22. Have you used voice input in a noisy place?

P6: I think once I was outside and there was some traffic. It still worked, but I had to speak again.

Q23. What happened?

P6: The first time it did not catch properly. I repeated the question and then it was okay.

Q24. Was the problem caused by noise or pronunciation?

P6: Probably noise. Or maybe I spoke too softly. I'm not sure.

Q25. How often do you need to correct the written prompt?

P6: Rarely. Usually it is correct. Sometimes one word needs changing.

Q26. Tell me about the last correction you made.

P6: I think a subject word was written differently. I changed it before sending. It was a small correction.

Q27. What kinds of words are more difficult for the microphone?

P6: Subject names, technical words, and sometimes Indian names. Normal English is okay.

Q28. Do you use more than one language while speaking?

P6: Sometimes I use English and Telugu. But for ChatGPT, I mostly speak English.

Q29. What happens when you mix languages?

P6: It may not understand one word. I don't do it much, so it's okay.

Q30. Why do you not use voice for long questions?

P6: I have not tried much. For long questions, I may forget something. Typing helps me see the points.

Q31. Tell me about the last long assignment question you typed.

P6: I had to explain an assignment question and ask for a format. I typed the main points one by one.

Q32. Where were you?

P6: At home. I was using my phone.

Q33. What happened next?

P6: I read the answer and asked it to make the format more simple. I typed another message.

Q34. Would voice have saved time in that situation?

P6: Maybe, but typing was not too difficult. I wanted to make sure I included all the points.

Q35. What is the main reason you use voice?

P6: For quick questions. It is convenient and saves a little time.

Q36. What is the main reason you type?

P6: For assignments and when I need to include details. Typing is clearer.

Q37. Does typing feel quicker or more familiar?

P6: More familiar. For a small question, both are quick. Sometimes typing is actually faster because I know what to write.

Q38. Have you ever started with voice and then changed to typing?

P6: Maybe once. The app did not understand the question, so I typed it. I don't remember if it was ChatGPT or Google.

Q39. What happened after you typed it?

P6: I got the answer. It was not a big problem.

Q40. What would make you use voice more often?

P6: If it understands every word properly. And if I have to ask something quickly while doing another task.

Q41. Can you remember a time when your hands were busy while using ChatGPT?

P6: No, not exactly. Maybe while arranging things, but I don't use ChatGPT then.

Q42. What would make you stop using voice?

P6: If there are too many wrong words or if it sends the wrong meaning. Then typing is better.

Q43. Do you check the transcription before sending?

P6: Yes, but only quickly. For a small question, I read it once.

Q44. What do you expect the app to show?

P6: The words I said, in the typing box. I should be able to correct them.

Q45. Do you prefer voice responses after using voice input?

P6: Not necessarily. I usually read the answer. I'm talking about voice typing, not the answer.

Q46. What will you use next time for a simple assignment doubt?

P6: Maybe voice if I'm alone. If I'm already typing, then typing.

Q47. What will you use for a detailed assignment prompt?

P6: Typing. I need to include the points properly.

Q48. Is privacy a major reason for your choice?

P6: Not major. Only when people are around. Usually I'm comfortable speaking at home.

Q49. What is the biggest limitation of voice input for you?

P6: Sometimes it misunderstands words or language. But it doesn't happen every time.

Q50. Is voice input useful for you overall?

P6: Yes, for short questions. It is convenient, but I don't need it for every question.

Q51. Is there anything else you want to add?

P6: No. I think voice is useful for quick questions and typing is better for detailed assignments.

Q52. Thank you for your time.

P6: Thank you.

Selected Participant Statements

"It was quicker. I just asked and got the answer."

"For assignments and when I need to include details, typing is clearer."

"Usually it is correct. Sometimes one word needs changing."

"Voice is useful for quick questions and typing is better for detailed assignments."

"Privacy is not major-only when people are around."

Interviewer Observations

- P6 is the most comfortable participant with occasional voice use in ordinary settings.
- Voice is treated as a convenience tool for short questions, not as a method for dictating long explanations.
- The participant reports relatively few corrections but recalls one occasion involving noise or speaking softly.
- Accuracy remains the main functional concern even though it has not caused frequent failure.
- Unlike P4 and P5, privacy is not a dominant everyday barrier.
- Typing remains preferred for detailed assignment prompts because it supports completeness and organisation.
- The participant's recall of the exact context of some voice uses was uncertain, and one prior voice-recognition incident may have involved another app rather than ChatGPT.

Research Handling Notes

The strongest evidence comes from specific past events: what the participant was trying to do, where they were, who was nearby, which input method they used, what went wrong, and what they did next. Speculative feature preferences are secondary evidence.
